

SIGMA: asset operation, maintenance and management on one comprehensive platform

SENER DIGITAL / REAL ESTATE / INTERNATIONAL

SIGMA: ASSET OPERATION, MAINTENANCE AND MANAGEMENT ON ONE COMPREHENSIVE PLATFORM

País: International

SIGMA is a unique platform for asset management during the operation and maintenance phase. It allows you to **analyze data globally**, query it in real time, manage maintenance work in an integrated way, report incidents and manage alarms from the BMS and SCADA. It will also allow you to carry out space management activities: you will be able to consult economic data related to building maintenance, as well as data on spaces and their occupation.

SIGMA eases operation and maintenance tasks and the management of spaces through a platform that integrates into one sole platform different softwares that work in an independent way.

It integrates all the softwares into one sole platform

Global data in real time

Economic space management

WHAT ELSE SIGMA PROVIDES

- BIM-GMAO-SCADA-ERP integration.
- Data querying and advanced analytics.
- Unique and reliable database of buildings and assets (BIM model).
- Visualization of BIM models linked to maintenance and operation.
- Alert, alarm and work order management.
- Report generation.
- Inventory check.
- Applicable to all types of buildings: offices, subway stations, shopping malls, hotels, etc.
